## **ADI KD-Rig .....The Ultimate Testing Validation!**

*Accelerating Development International*

*Applies New L.A.P.S Simulation For Daytona Track Tests!*

**Concord, North Carolina (Thursday January 17, 2008)** - Accelerating Developments International, LLC (ADI) announced today that the recent addition of their L.A.P.S Track Simulation put recent customers at the top of the speed charts in Daytona.

“The L.A.P.S technology is major breakthrough in vehicle dynamics testing and analysis for NASCAR, IRL, and Formula 1” says Jay Drake, ADI Engineering Director/General Manager. “L.A.P.S testing results during the recent NASCAR tests at Daytona that were linked to pre-testing simulation on the ADI KD-Rig provided validated results and placed those cars tested at the top of the speed charts. Several teams involved with the ADI test trials are currently negotiating for delivery of their own in-house KD-Rig for the 2008 NASCAR season. “*Considering the new direction set-up is taking and limited track time, there is no question that ADI with its KD-RIG can sort through the set-up and even eliminate many of the variables encountered during track testing*” Said Larry McReynolds, Fox Sports Analyst and former NASCAR Crew Chief.

L.A.P.S (Logistic Algorithmic Profiling System) is the latest addition to the KD-Rig, the newest kinematics and dynamics chassis and suspension testing available today. With only 6 months from design to development, L.A.P.S is now available as an option for the KD-Rig. ADI is also making L.A.P.S available as a retrofit to the K-Rig, APR Rig and most other makes of kinematics and dynamic test systems.

Accelerating Developments International is a leading provider of technology, product innovation, engineering solutions and strategic consulting to the automotive, OEM and Motorsports industries. ADI designs and builds the K-RIG and the KD-RIG and with the acquisition of APR, Accelerating Developments International is now able to provide the most up-to-date full service line of chassis and suspension testing available in the Motorsports industry today. The past November, the KD-Rig was voted the #1 Testing Technology 2007 by Professional Motorsports World at the Motorsports World Expo in Cologne, Germany.

Accelerating Developments International, a privately held company headquartered in Concord, NC. provides comprehensive, integrated engineering services spanning design, analysis, prototyping, testing, product development and short-run production. The ADI team has over 25 years experience in developing and designing motion control systems and are recognized for their ability to find solutions. ADI provides “in-house” testing for static, semi-dynamic and fully dynamic simulation and measurement.
